The Presentation Materials are being issued on a strictly private and confidential basis and solely to and directed at (a) persons having professional experience in matters relating to investments and who are persons specified in Article 19 and/or Article 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Financial Promotions Order"); or (b) who are otherwise permitted to receive them. This document is exempt from the general restriction on the communication of invitations or inducements to enter into investment activity and has therefore not been approved by an authorised person as would otherwise be required by section 21 of the Financial Services and Markets Act 2000. Any investment to which this document relates is available to (and any investment activity to which it relates will be engaged with) only those categories of persons described above. It is a condition of your receiving this document or attending this presentation that you fall within, and you warrant and undertake to Coal of Africa Limited ("the Company") that (I) you fall within, one of the categories of persons described above, (ii) you have read, agree to and will comply with the terms of this disclaimer and (iii) you will conduct your own analyses or other verification of the data set out in the Presentation Materials and will bear the responsibility for all or any costs incurred in doing so. The Presentation Materials are confidential and should not be copied, distributed or passed on, directly or indirectly, to any other class of persons. They and any further confidential information made available to you are being supplied to you solely for your information and may not be reproduced, forwarded to any other person or published, in whole or in part, for any other purpose. The Presentation Materials contain only a synopsis of more detailed information in relation to the matters described in this document and accordingly no reliance may be placed for any purpose whatsoever on the sufficiency or completen

The information contained in the Presentation Materials is for background purposes only and is subject to updating, completion, revision, amendment and verification, which may result in material changes. No reliance should be placed on the information and no representation or warranty (express or implied) is made by the Company, any of their respective directors or employees or any other person, and, save in respect to fraud, no liability whatsoever is accepted by any such person, in relation thereto.

Overview

CoAL

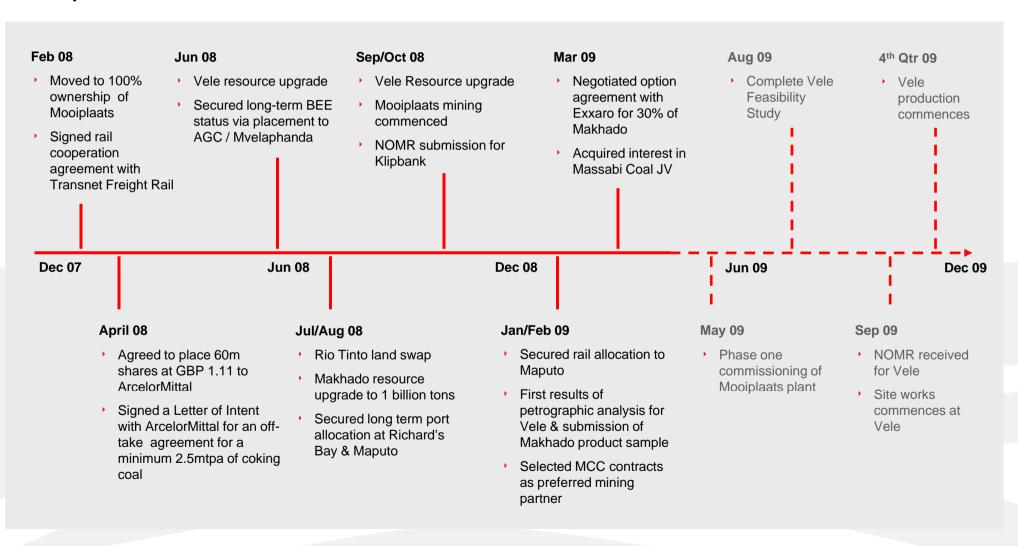

- An emerging South African coking and thermal coal producer
- Samrec/JORC coal resources /reserves in excess of 2 billion tonnes
- Mooiplaats first revenue expected mid-2009 and cash flow positive by year-end
- Coking coal production last quarter 2009 (subject to grant of NOMR)
- Fully funded through to production at Mooiplaats (thermal) and Vele (coking)
- Letter of Intent signed with ArcelorMittal at Vanderbijlpark for coking coal off take
- Close to strategic infrastructure for exports
- Strong shareholder base
- Highly competitive cost structures

Progress & Forward Plan

•CoAL's achievements over the past year demonstrate the benefit of progressing quickly on multiple fronts

Coking Coal Market

Medium-term supply challenged by rising costs and greenfields infrastructure requirements

Coking Coal Market

- Demand from 2009 onwards expected to grow at 7.0% per annum
 - Growth in Western Europe of 8mtpa expected over the period 2009-12
 - Growth in Japan, India, Korea & Brazil of 7mtpa, 7mtpa,
 6mtpa & 5mtpa respectively over the same period
- New supply will predominantly come from Australia
- Prices are forecast to remain around US\$130/t for hard coking coal
 - Benchmark price of US\$115-125 agreed by BHP Billiton and Nippon Steel in March 2009
- China domestic prices remain above US\$150/t on constraints to domestic supply (largely sourced from small mines) and recovering steel production
- Upside risk comes from continued strong pig iron production growth in China, where production has been significantly ahead of expectations through Q1 09

Thermal Coal Market

Medium-term supply dependent on infrastructure development, lower quality coals

Thermal Coal Market

- Demand from 2009 onwards expected to grow at 5.1% per annum
 - Growth in demand from Asia expected of 83mtpa expected over the period 2009-12. Most notably China & India with growth of 24mtpa & 25mtpa respectively
- Supply growth driven from expansions in Australia and Indonesia
- Longer-term forecast prices to remain around US\$73/t
 - Annual Japanese contracts agreed at US\$70-72 by Coal &
 Allied with in March 09
- India soaked up excess supply from South Africa up around
 1.5mt in Q1 09 offsets European weakness
- Upside risk comes from positive price catalysts in China, particularly improved electricity demand and continued constraints on mine supply
 - Chinese prices have stayed at ~US\$75/t on supply constraints & hints of higher demand in March. Stockpiles at Qinhuangdao retreated to 3 year lows in mid-April
 - China limiting downside for prices and an arbitrage opportunity has emerged in Southern China

Project locality: In relation to Coalfield

Response to Current Environment

How is CoAL responding to the current market conditions and positioning itself for the future?

Focussing on:

- Low cost production
- Low capex
- Near-term acquisition opportunities
- Significant long-term organic growth from existing large resource base

Continuous Miners working underground -13/02/09

Competitive advantages

 The availability of financially strong contractors supplying their own equipment (due to the recent downturn)

 The inherent strategic advantages of the geologically simple, close to surface ore bodies

 Adjacent to existing rail and port infrastructure assets result in projects being low on the cost curve

Resulting in

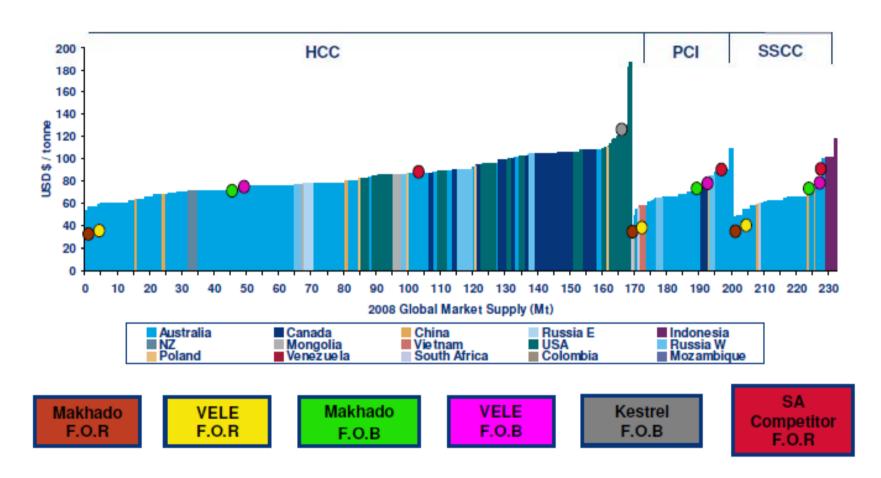

Chief Geologist Charles Mafiri - Wide diameter cores from Vele

The Overvaal Siding

2008 Export Metallurgical Coal FOB Cost Curve - World

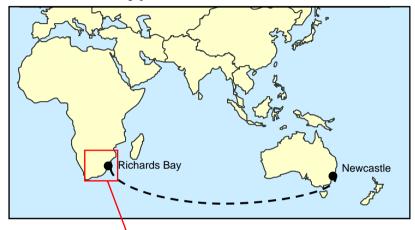

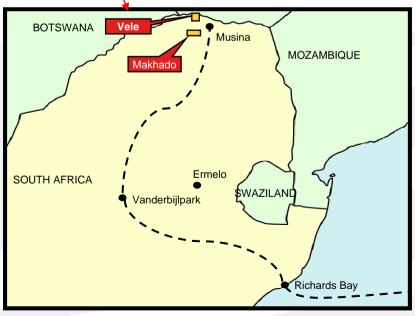

The Kestrel option versus the CoAL option

With a significant freight advantage due to their proximity to South Africa's largest steel mill Vanderbijlpark, Vele and Makhado are ArcelorMittal's lowest cost option for hard coking coal

- ArcelorMittal currently sources a significant tonnage (~2mtpa) of its coking coal for Vanderbijlpark from the East coast of Australia
- Gate-to-gate from east coast Australia (Newcastle) to Vanderbijlpark is 12,000km vs Musina to Vanderbijlpark
 530km
- Significant savings to ArcelorMittal ensures CoAL is able to find a market for its product at all stages of the global economic cycle at a healthy margin
- Initial quality analysis suggests that the coking coal produced from a combination of Vele and Makhado can replace most of AcelorMittal's coking coal requirements

Business Model

- Prioritisation of asset development is ranked by best margins, lowest volatility of markets, financial strength of potential customers and quickest regulatory process
 - Vele: lowest cost supplier to Mittal at Vanderbijlpark
 - Mooiplaats: delivers into a comparatively resilient and stable thermal coal market
 - Assets can be developed at low capital cost by using either contract mining or staged development
 - Assets have ready access to strategic infrastructure facilitating exports without the need for large capital expenditure

Vele Update (coking coal)

- Development of Vele will be staged to meet funding availability and off take
 - Initial underground development will utilise box cut developed for bulk sampling
 - All mining equipment to be supplied by MCC,SA's largest open-cast mining contractor
 - Mobile wash plant will be used for ramp-up phase
 - Owners capex of US\$35m to get Vele into production at ~1.5mtpa
 - GRD Minproc PFS / DFS to be completed mid-2009

Coking Coal Business Targets

CoAL is committed to the fastest possible development of its assets, given its existing cash resources of \$A122 million as at 31 March 2009

Coking coal priorities

- Secure a new order mining right at Vele (expected Q3 2009)
- Bring Vele into production by the end of 2009; mine development commencing Q3 2009
- Bring Makhado into production by Q3/Q4 2010 funded by Vele and Mooiplaats cashflow

1. Mittal offtake – secures CoAL's future

2. Bulk sample program — Q3 2009 subject to DME approval

3. Complete Vele PFS / DFS — while waiting for NOMR

4. Mining Contract — lower capital costs by

partnership with financially

strong contractor (MCC, a

subsidiary of Eqstra)

Thermal Coal Business Targets

CoAL's thermal coal business will enter cash positive production by the end of 2009.

Thermal coal priorities

Deliver Mooiplaats production and revenue in 2009

Secure off take – Eliminate market risk

2. Commission plant – Q2 2009

3. Ramp-up production — 140,000tpm ROM by Dec 2009

200,000tpm ROM by Q2 2010

4. Develop south mine — As market / funding permits

(Kilpbank)

CoAL achieved production under budget at the Mooiplaats thermal coal project ~20 months after its acquisition (including award of NOMR)

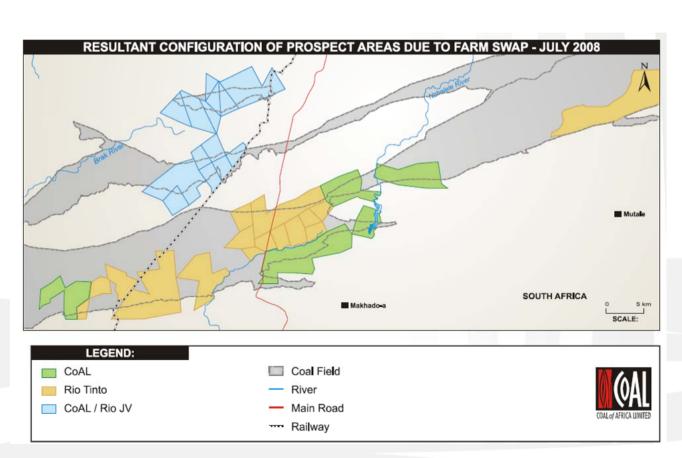

First cutting at Mooiplaats mine - 20 /11/09

Future Growth Potential

With Vele and Mooiplaats in production the Company will have a substantial income and resource base to pursue further growth opportunities as the commodity cycle turns

- Makhado farms (resources > 1.5bnt)
- Rio JV farms (resources > 0.5bnt)
- Potential supply of coking coal middlings to Eskom
 IPPs (Mulilo – Vele and AES – Makhado)
- ... provides substantial "blue sky" returns

Board & Management

Board Members

Richard J Linnell Executive Chairman

- Active in the resources and metals fields for over forty years
- Originator of the Bakubang Initiative, a Forum designed to revive the South African Mining Industry which led to the establishment of the New Africa Mining Fund, of which he is Chairman of Trustees
- Holds a number of Directorships in the junior mining sector

Simon J Farrell Managing Director

- Has held a number of senior management and Board positions, in the resources sector over the last twenty years
- Currently a Director of LSE listed Kenmare Resources plc
- Bachelor of Commerce from the University of Western Australia and an MBA from the Wharton Business School

Blair Sergeant Finance Director

- Member of the Chartered Institute of Company Secretaries and the Australian Society of Certified Practising Accountants
- Currently a Non-executive Director of Vmoto Limited and Ram Resources Limited, both listed on the ASX
- Bachelor of Business and Post Graduate Diploma in Corporate Administration, both from Curtin University, Australia

Steve Bywater Non-Executive Director

- Former COO of Rio Tinto Coal Australia, and oversaw 7 mining operations, producing 60Mtpa of saleable coal per year.
- CE of GCM Resources PLC
- B.Sc. in Engineering, Geology and Geotechnics from Portsmouth University and an M.Sc. in Rock Mechanics and Excavation Engineering from Newcastle-upon-Tyne

Peter Cordin Non-Executive Director

- Managing Director of ASX listed Dragon Mining Limited
- Bachelor of Engineering from the University of Western Australia and is well experienced in the evaluation, development and operation of resource projects within Australia and overseas

Pierre Leonard Non-Executive Director

- General Manager, Mergers and Acquisitions for ArcelorMittal
- PhD in Industrial engineering from the University of Pretoria in South Africa

Alfred Nevhutanda Executive Director

- Holds two doctorates, an MBA and a Diploma in Business Studies
- He is a specialist in Environmental Sciences, Transport & Logistics

Management

Riaan van der Merwe Chief Operating Officer

- Over 19 years experience in the South African coal industry in the Anglo American Group
- Has held senior management positions in both the opencast and underground mines
- Previously headed up the Anglo Coal South Africa's Eskom and Export operations

John Sparrow Principle Coal Consultant

- Over 25 years experience in the field
- A former divisional Geologist of Sasol

Charles Mafiri Chief Geologist

Over 22 years experience in geology and mining in South Africa

Lemogang Pitsoe Operations/Mine Manager

- Over 12 years experience in the mining industry.
- Previously part of the Department of Minerals and Energy task team during the drafting of the MRPDA

Colin Gordon General Manager

Over 10 years experience in project and general management

Nico Pretorius Engineering

19 years experience in the South African coal mining industry with the Anglo American Group

Held various engineering positions in Anglo Coal at mine and corporate level

Registered as a Professional Certificated Engineer with the Engineering Council of South Africa

Ayanda Khumalo Operational Accountant

- Over 15 years commercial experience in various accounting fields
- A qualified CA(SA), Ayanda has spent the past 5 years as a Financial Director for a platinum producer in South Africa

Project Information

Mooiplaats - Overview

Mooiplaats commenced ROM production in November 2008 and commissioned wash plant in May

2009

Key Figures

Ownership: 100%

Resource: Measured 88Mt; Indicated 25Mt

Production: Ramp up to 2mtpa thermal coal from Q3 2010

Capex: Phase 1: USD 65m (USD 42m spend to date)

Phase 2: USD 29m

¹Opex (All products): USD 28/t (per saleable tonne)

²Opex (Bituminous only): USD 30/t (per saleable tonne)

Highlights

- North mine fully funded without any debt, potential staged development of South mine pending capital prioritisation
- ROM production commenced in October '08, and rapid ramp-up to an <u>annualised</u> ROM of 1.3mtpa,1.7mtpa & 2.3mtpa expected by end of Q3 '09, Q4 '09 & Q1'10 respectively
- Port allocation of 900kt with potential to increase to 2.9mtpa secured via strategic partnership with Grindrod
- Further, Transnet rail allocation obtainable via strategic relationship with Mittal (rail backload for imported coking coal)
- Significant logistics advantage in supplying coal to Eskom's Camden Power Station which is 1.7km from the Mooiplaats mine
- Potential to significantly increase resource from neighbouring farms

^{1:} Opex is the real total LOM average cost over all products; this includes mining, processing & logistics costs; excludes royalties & sales commissions @ Fx rate :10

^{2:} Opex is the bituminous cost per tonne with credit from the sale of the 2nd wash discard @ Fx rate :10

Vele - Overview

Vele is a unique hard coking coal asset, ideally placed to supply ArcelorMittal's Vanderbijlpark

steel works

Key Figures

Ownership: 74%

Resource: Measured 177Mt; Indicated 417Mt,

Inferred 62Mt and Reconnaissance 64Mt

Production: Phase 1: 1.5Mtpa

Phase 2: 5.0Mtpa

Capex: Phase 1: US\$35m

Phase 2: US\$265m

¹ Opex FOR: USD 43/t (per saleable tonne)

Highlights

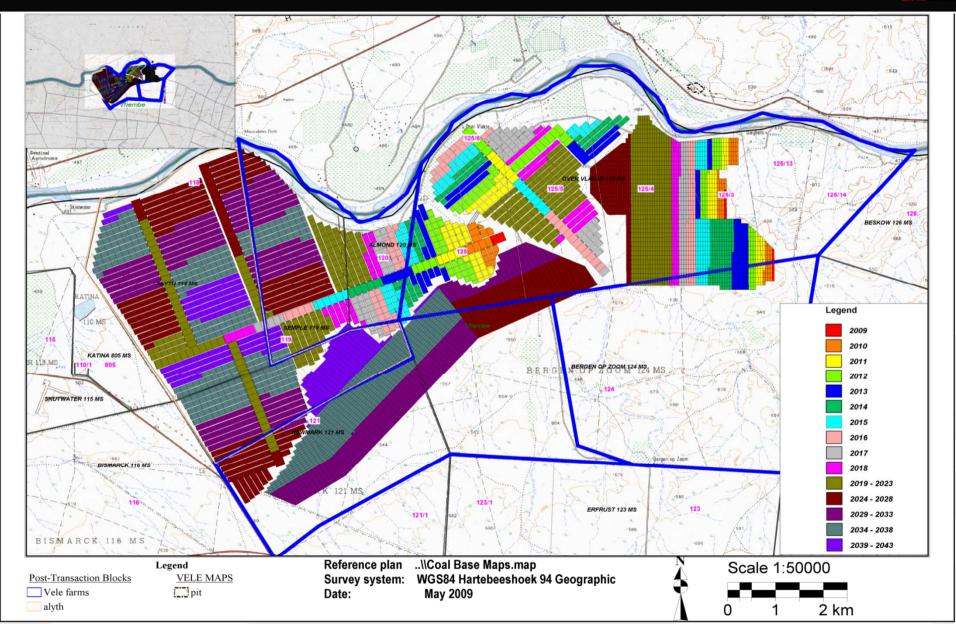

- 100% fundable out of current cash reserves
- Letter of Intent with Mittal to take 2.5-5.0Mtpa from Makhado/Vele, replacing Australian imported coal to Vanderbijlpark
- NOMR application lodged and acceptance letter received
- Will finalise quality analysis, formalise Mittal off take and complete feasibility before NOMR granted
- Vele comprises opencast and underground sections amenable to modular staged development.
- Have selected MCC Contracts a division of Eqstra Holdings Ltd as its preferred partner to conduct opencast mining operations
- Site has ready access to power and water
- 1st wash discard potentially usable in Independent Power Project

^{1:} Opex is the real total LOM average cost inclusive of mining, processing & transport to Musina; excludes rail, port, royalties & sales commissions @ Fx rate : 10

Vele Mining Layout and Period Progress Plot

Makhado - Overview

Makhado is a world class, long life prime hard coking coal asset offering significant growth potential

Key Figures

Ownership: 100%

Resource: Measured 230Mt; Indicated 549Mt,

Inferred 251Mt and

Reconnaissance 306Mt

Production: Phase 1: 1.5Mtpa

Phase 2: 5.0Mtpa

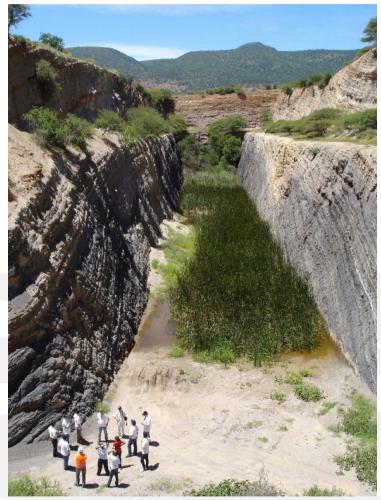

Capex: Phase 1: US\$50m

Phase 2: US\$220m

¹ Opex FOR US\$47/t per saleable tonne

Comments

- CoAL has acquired a 1,200 borehole drilling database from Iscor/Exxaro relating to the area
- Potential for further resource expansion following Rio Tinto farm swap
- 1st wash discard potentially usable in Independent Power Project
- Environmental studies progressing
- Exxaro has secured an option to acquire up to 30% of the project for cash consideration based on NPV

Box cut at Fripp - Makhado

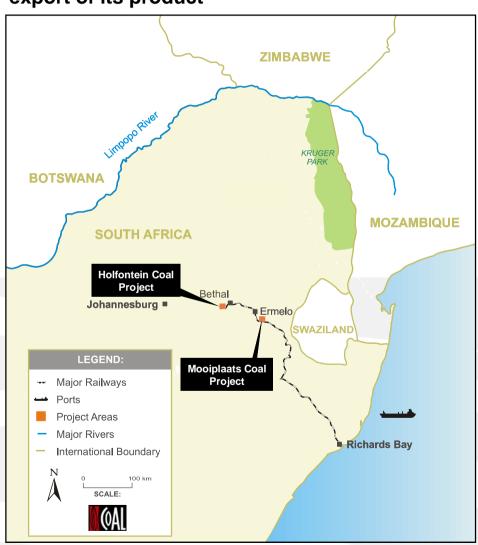

^{1:} Opex is the real total LOM average cost inclusive of mining, processing & transport to Musina; excludes rail, port, royalties & sales commissions @ Fx rate :10

Logistics Summary: Mooiplaats

CoAL has entered into strategic agreements with rail and port infrastructure owners that will ensure access to necessary transport capacity for export of its product

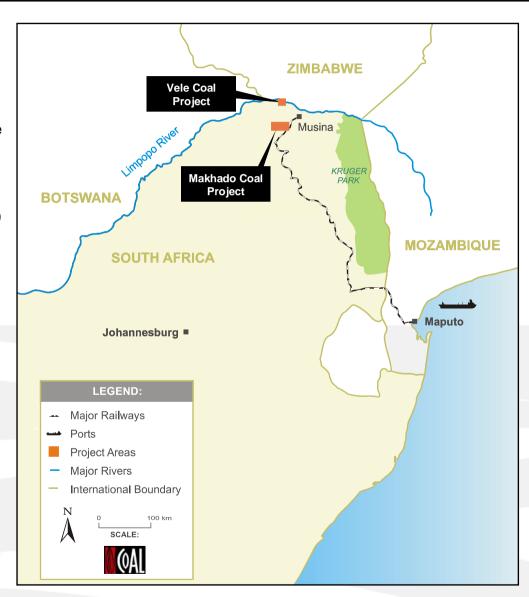

- Export product will be transported by rail from Ermelo to Richards Bay, and then exported through the Grindrod facility using the conveyor belting and berths of Transnet Port Terminals Dry Bulk Terminal (DBT) for a period of 5+5 years
 - DBT port capacity secured for CoAL is 0.9Mtpa starting in 2009
 - CoAL has also secured rights from Grindrod Terminals to 50% of the planned increase in future coal capacity via this export route
 - Grindrod Terminals has announced its expansion plans which will create an additional 2Mtpa from June 2010
 - This will take CoAL's total allocation up to the required
 3Mtpa
- Plan is to utilise the back haul opportunity of existing
 ArcelorMittal rail wagon fleet that currently transports import coking coal of 2mtpa

Logistics Summary: Vele/Makhado

- 2.5-5 Mtpa will be taken at Musina by Mittal for consumption at Vanderbijlpark and Newcastle Steelworks
- The balance of the coal will be transported from site via new rail links that connect to the existing rail network that connects to the Maputo Terminal port in Mozambique at between US\$25 - 30 /tonne
- Maputo port capacity secured for CoAL is 1Mtpa starting in 2009 at US\$9/tonne for a period of 5+5+5+5 years
 - Agreement to provide funding to expand Matola Terminal for 100% of any increased capacity
 - Feasibility study underway for a new terminal that can handle up to a further 10Mtpa i.e. a total of 13Mtpa
- East Coast Maritime appointed to manage planned rail flows and develop necessary rail siding infrastructure and logistics for the projects
 - Secured rail allocation with Transnet Freight Rail for
 1mtpa to Matola terminal.
 - Conceptual route determination completed and busy with
 EIA process to finalize private siding rail routes
